GLS® Globe Control Valve

GLs Series Globe control valve presents superior performance, and also permits simple, fast and inexpensive maintenance. Unlike the spring-diaphragm actuator control valves, the GLs Series operates with a double guided piston-cylinder actuator with a fail-safe spring. It provides pneumatic stiffness, assuring excellent alignment precision in throttling control, as well as fast and reliable replies to command signal variation. The GLs Series actuators handles up to 150 psi (10.3 Bar) supply air pressure and has the thrust to shut off against higher fluid pressures.

Spring-diaphragm actuators rely entirely on the spring thrust to shut the valve, while in the GLs Series, the spring, supply air pressure and fluid pressure combined produce exceptionally tight shutoff, therefore assuring exceptional tightness. Due to its self-aligning seat ring design, the GLs valve easily achieves the tightness required.

The most current problems associated to control valves can be associated to cage-guiding. The close contact of the seat retainer and plug metal surfaces often results in galling and sticking. The superior double guided system of the GLs Series is located out of the flow stream and eliminates direct contact between the plug and seat retainer.

The actuator is more compact, lighter and easier to handle when compared to conventional spring-diaphragm actuators. Due to its modern design, the valve-actuator set presents great toughness, what makes the GLs Series a world reference in its category.

GLs - Body Subassembly

Body Styles

Conventional Globe style body

The GLs Series Globe style bodies present smooth flow stream. The internal area allows for constant stroke, without pockets, allowing high flow capacity with minimum turbulence.

These bodies are built with uniform wall thickness, resulting in less weight and cheaper costs, especially when manufactured in expensive stainless steel and special alloys.

Angle-style Body

The angle-style body of the GLs Series Valve is completely interchangeable with the conventional globe style; saving the body, all other valve elements remain the same.

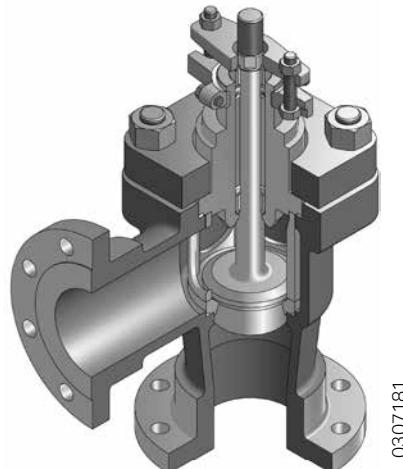

Depending on the application it will be used for, the GLs angle-style body valve can be supplied with a special venturi seat ring, which extends to the outlet flange providing additional protection against corrosive flow.

Three-way Body

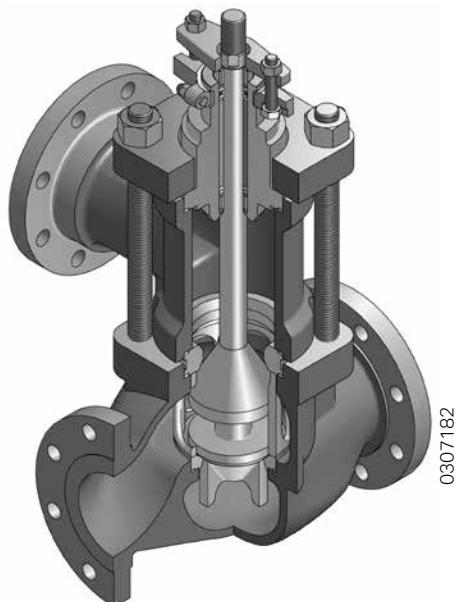

Three-way bodies are used for either combining or diverting services. Due to the great interchangeability of the GLs Series design, a standard globe valve can easily be converted to a three-way, by simply adding a three-way adaptor, an upper seat ring, two gaskets and a special three-way plug.

Steam-jacketed Body

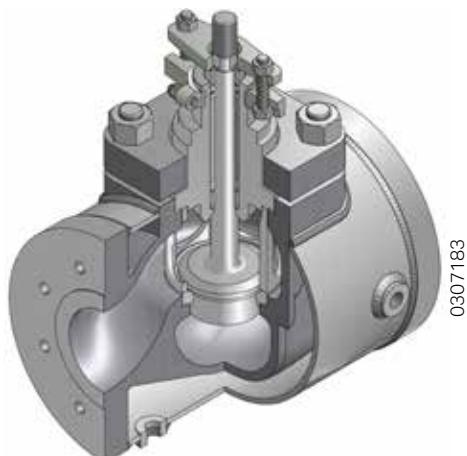

The steam-jacketed GLs Series valve uses a globe style body equipped with blind flanges, which are used for partial jacket, or oversized, for full jacket. Usually the jacket is designed for 150 psi (10.3 Bar) saturated steam maximum pressure and is equipped with NPT screwed connections (other types available under request). When ordering a steam-jacketed valve, the client should specify the type of jacket required, as well as the steam specification, quantity and type of connections.

Angle-style Valve

Three-way Valve

Steam-jacketed Valve

GLs - Body Subassembly Characteristics

In the control of modern industrial processes, the GLs Series always comes to mind when considering strength, versatility and performance:

Strength

The design of the GLs valve makes it less susceptible to fluid corrosion when compared to conventional globe valves. The heavy-duty plug stem, as well as the other valve elements, was designed for severe services and can operate on high pressure drops.

For sizes up to 3 inches diameter, versions equipped with separable flanges cover all ANSI Class 600 applications, by simply changing the end flanges. When required, valves can be supplied with anti-cavitation and noise-trim options.

Sealing

Besides providing precise control, the GLs valve design with self-aligning seat ring also provides exceptional sealing, which is reinforced by the flow pressure. With normal air supply, the piston-cylinder actuator guarantees tight shutoff, while in airless condition the actuator spring and the flow thrust drive the plug into desired fail position.

Easy, fast and inexpensive maintenance

Top-entry trims service. Once the bonnet flange nuts are taken out, the bonnet and plug can be removed from the valve, clearing the access to other internal components.

The seat ring, fitted and fixed by the retainer, can be dismantled and reassembled without the use of tools, as well as all the other valve and actuator components. The valves compact size and light weight facilitates its handling at maintenance tasks and assembly.

Guiding and Packing

The GLs Series guiding system deserves a special mention. In addition to eliminating the disadvantages of the guiding system at the seat retainer, the GLs Series guides are widely spaced and display a large supporting surface, eliminating vibration related problems in control valves.

As a result of using this advanced guiding system, the heavy duty GLs valve plug stem can be submitted to twice the force produced by the oversized actuators available, without the risk of buckling.

The GLs Series packing box great depth allows the use of all packing available at ValtekSul, while the perfect finishing of the bonnet's inner area and plug stem provides longer service life of the packing, without leaks.

Trims that do not stick

The superior double-stem guiding system, located out of flow steam, ensures perfect alignment of the plug stem, at the same time that provides a generous clearance between plughead and seat retainer, eliminating galling associated with cage-guiding.

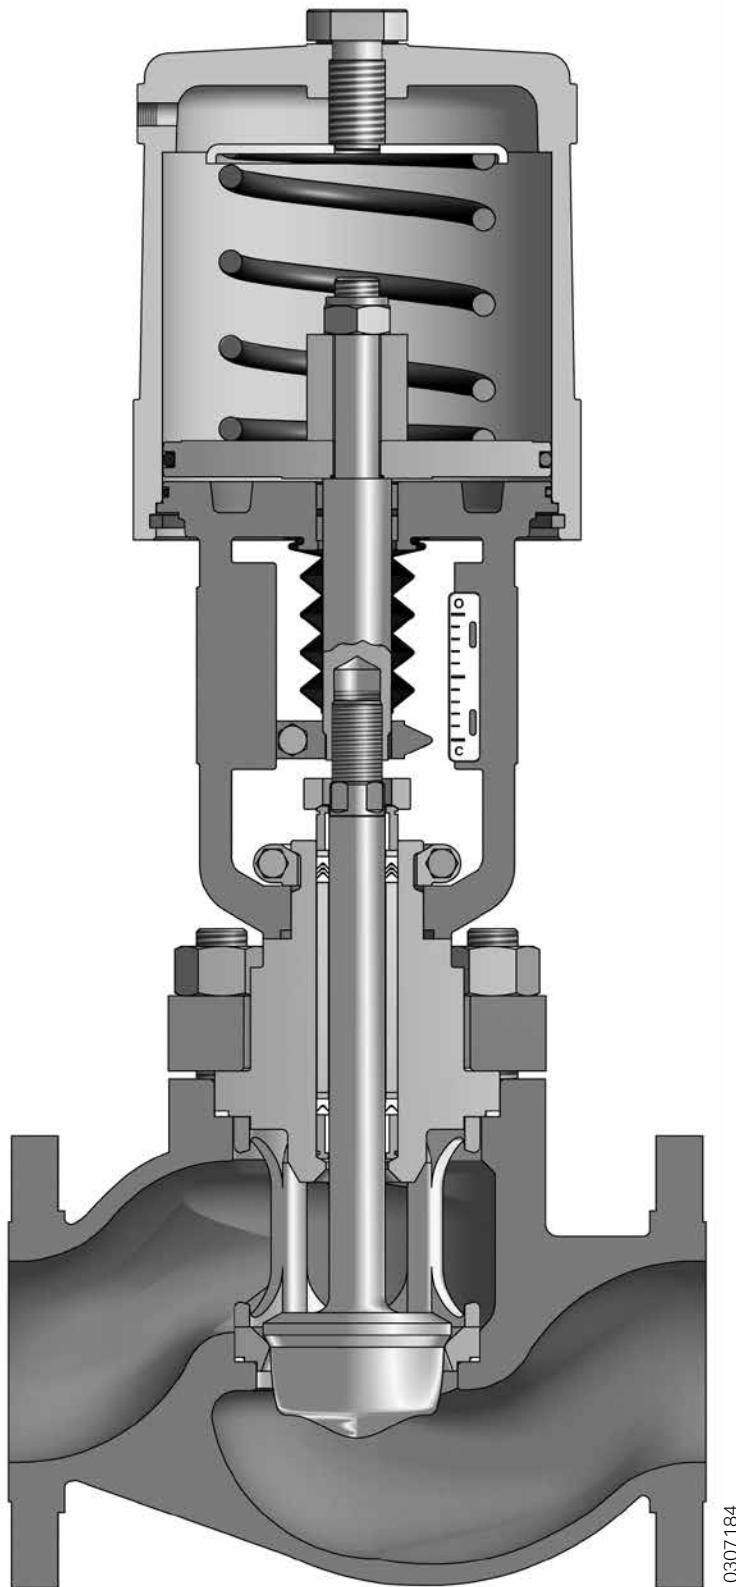

Versatile

Besides the conventional Globe bodies, angle-style, threeways and steam-jacketed bodies are available and meet the diverse face-to-face standards.

The modular concept of the design ensures high degree of interchangeability between the different versions and diameters, substantially reducing the need of spare parts.

The GLs is the largest of the valves available on the market.

GLs - Body Subassembly Additional Advantages

GLs Control Valve

Piston-cylinder actuators – Advantages:

- » High thrust cylinder actuator and pneumatic stiffness;
- » Field reversible, no need for spare parts;
- » Trustworthy operation;
- » Smaller than spring-cylinder actuators of similar force;
- » Controlled high speed;
- » Accurate positioning, with faithful response;
- » High repeatability;
- » Allows the assembly of various types of positioners and parts;
- » Optionally can be supplied with various types of manual handwheels and limit stops;
- » Admits supply air pressure of up to 150 psi (10.3 Bar), without the need of a pressure regulator.

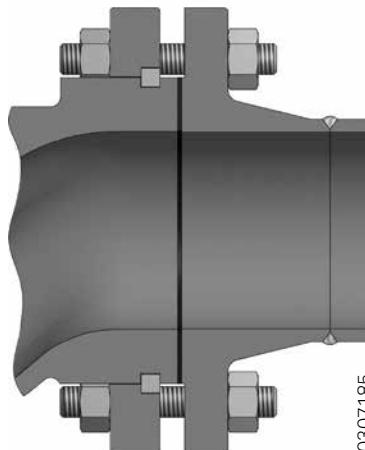

GLs - Body Subassembly Connections, Flanges, Bolts

As standard, the GLs Series valves are supplied with integral flanges and raised face. To achieve better sealing with mating piping, the flange face is machined with spiral grooved serration. Other optional facings include smooth face, flat face, ring-joint, large and small tongue and large and small groove.

Separable end flanges

Interchangeable separable flanges are standard supply for valve bodies of up to 4 inches diameter, in ANSI Class 150, 300 and 600. With separable flanges, an ANSI Class 600 body can be adapted for operating in ANSI Class 150, 300 or 600 by simply changing the end flanges.

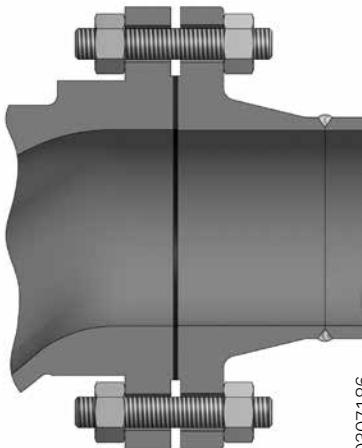

Separable flanges are usually furnished in carbon steel, aiming at maximum cost savings, although stainless steel can be ordered if the service temperature or pressure requires.

Separable Flange

Bonnet flange

The bonnet flange design follows the same concept of the separable flanges of the GLs valve bodies. The bonnet flange is usually furnished in carbon steel, but can be supplied in stainless steel when needed.

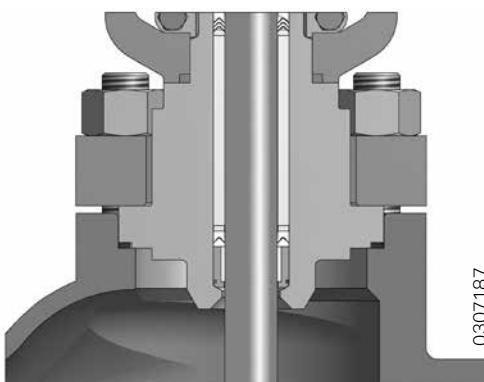

Integral Flange

Bonnet flange assembly

The GLs Series standard bonnet is assembled to the body using stud bolts and nuts. The studs standard material is the ASTM A193 Gr. B7 and the nuts material is the ASTM A 194 Gr. 2H, suitable for -20 to 800°F (-28 to 426°C).

Optionally, the stud bolts and nuts can be furnished in stainless steel, supporting temperatures of -425 to 1500°F (-253 to 815°C). These temperature limits are for maximum pressure permitted by ANSI B16.34, latest edition.

Separable Bonnet Flange

End Connections

End Connection	Valve Nominal Diameter (in.)	ANSI Standard	(ANSI/ISA) Face-to-Face Standard

Buttweld	0.5 to 36	150-600	75.08.05 ⁽²⁾⁽³⁾

⁽¹⁾ For diameters larger than 16 in., face-to-face dimension will follow Valtek Sulamericana standard.

⁽²⁾ Long pattern.

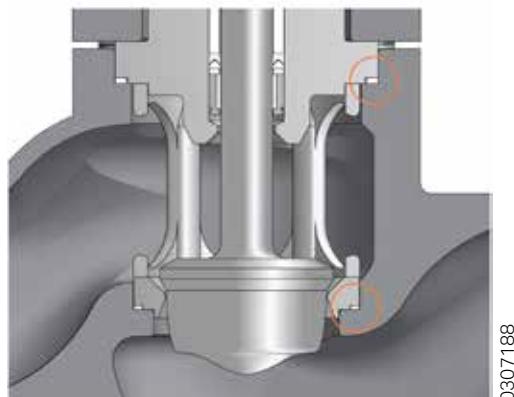

⁽³⁾ For diameters larger than 16 in., face-to-face dimension will follow Valtek Sulamerica standard.

GLs - Body Subassembly

Gaskets, Clamps

Gaskets

The GLs Series was designed with the bonnet and the seat ring gaskets fully retained. The valve bonnet has a step that acts as mechanic stop and limits gasket compression. In this way, the bonnet gasket remains completely sealed and its compression is determined by the gasket step on the bonnet. The GLs Series was designed with the bonnet and the seat ring gaskets fully retained. The body, seat retainer and seat ring are all machined to close tolerances to provide the proper gasket compression. Unlike the bonnet, the seat ring does not always bottom in the body (metal-to-metal), allowing this small clearance to compensate for manufacturing tolerances and thermal expansion.

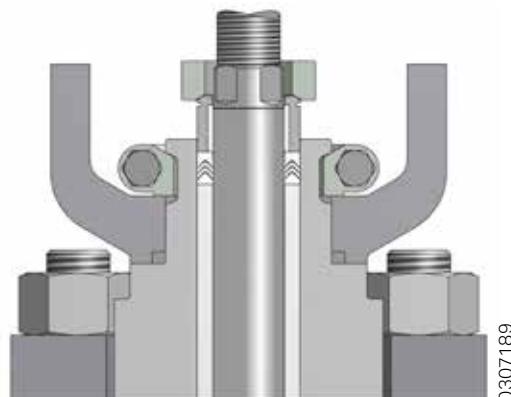

Body Gaskets

Clamps

The GLs Series actuator is usually attached to the body with two precision-cast, stainless steel yoke clamps. Each clamp has an inclined plane surface which, when bolted together, securely fastens the actuator yoke to the bonnet. Unlike conventional threaded clamps, the clamp design of the GLs valve permits easy removal, even under extremely corrosive conditions.

In bigger valves with higher pressure classes, the yoke is directly fixed to the bonnet using bolts.

Yoke Clamps

Standard Gasket Specifications - ASME B 16.20

	Type	Gasket Material	Temperature Limits		Pressure Limits

	O-Ring	Inconel X-750	-20 to 1500	-28 to 815	15000 psi (1034 Bar)

⁽¹⁾ Limited to 800°F (426°C) for oxidizing service. ⁽²⁾ Gasket material asbestos free. ⁽³⁾ Contact ValtekSul for information on pressure limits according to material.

⁽⁴⁾ Lower temperatures available upon request.

⁽⁵⁾ For more information, consult www.literature.valteksul.com - Bulletin number 13 of the catalogue Valve Sizing and Selection.

GLs - Body Subassembly

Bonnet Types

Standard Bonnet

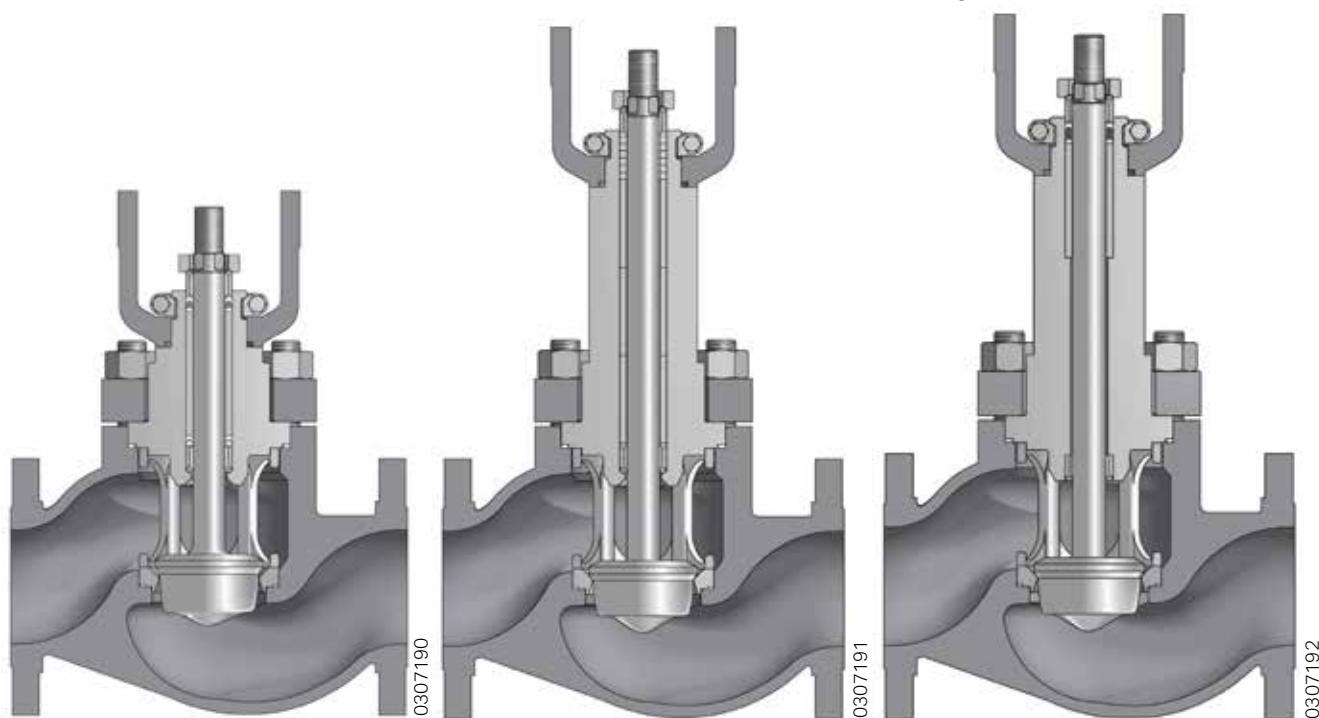

The GLs Series standard bonnet is usually constructed of the same material as the body and handles temperatures from -20 to 750°F (-29 to 400°C), depending on the packing material. (See page 9 for temperature limits of different packing materials.)

Extended Bonnet

The extended bonnet protects the packing from excessive heat or cold, which may inhibit valve performance. The extended bonnet manufactured in carbon steel handles temperatures from -20 to 800°F (-29 to 426°C), while the extended bonnet in 304 or 316 stainless steel can handle temperatures from -150 to 1500°F (-100 to 815°C).

Extended bonnet for cryogenics

The design of the GLs Series extended bonnet for cryogenics permits that a small amount of the cryogenics fluid be vaporized and remain stagnated inside, at moderate temperature, which protects the packing. It is usually manufactured from 304 or 316 stainless steel, handling temperatures down to -423°F (-253°C). Standard construction consists of stainless steel bonnet flange and bolting.

GLs Series Bonnet Types

Bonnet Flange and Studs Materials

Bonnet Flange (Standard)	Bonnet Flange (Optional)	Studs and Bolts (Standard)	Studs and Bolts (Optional)
Carbon Steel	Stainless Steel ⁽¹⁾ or the same body material.	ASTM A193 Gr. B7 / ASTM A 194 Gr. 2H ⁽²⁾	Stainless Steel 304 or Stainless Steel 316 ⁽¹⁾⁽³⁾⁽⁴⁾

⁽¹⁾ The optional materials for the flange and the bonnet assembly elements are required when the temperature and pressure limits of the carbon steel and the assembly elements in B7/2H are exceeded.

⁽²⁾ Temperatures from -20 to 800°F (-28 to 426°C), provided that the body class pressure is complied.

⁽³⁾ Temperatures from -425 to 1500°F (-253 to 815°C), provided that the body class pressure is complied.

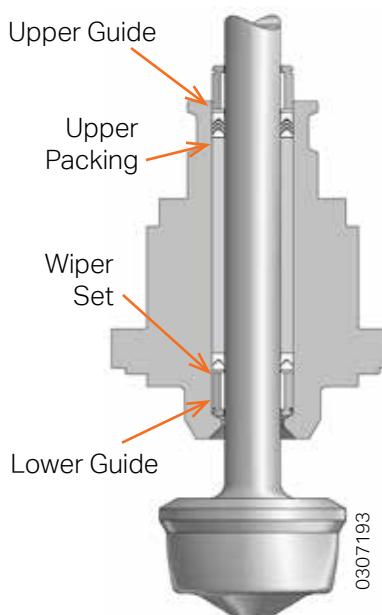

⁽⁴⁾ Other materials under request, depending on the project requirements.

GLs - Body Subassembly Packing and Guides

Packing Box

The GLs valve packing box is deep and presents perfect superficial finishing, allowing the assembly of all ValtekSul standard packing options, with the following additional advantages:

1. The spacing between the wiper set and the main upper packing set prevents contact with the wet parts of the plug stem.
2. Two widely spaced guides, placed out of the flow stream, combined to the plug stem, form the advanced guiding system of the GLs Series. The upper packing also acts as gland packing, and the lower guide is situated close to the plug head, ensuring accurate alignment of plug and seat ring.
3. The guide options cover all applications and eliminate galling between the metal parts.

**Guides and Packing Set
Typical Arrangement**

Packing Set Temperature Limits

Bonnet Type	Packing Material	Temperature Limits ⁽²⁾	
		°F	°C
Standard ⁽¹⁾	PTFE Vee Ring	-20 to 450	-29 to 232
	PT and PTG	-20 to 450	-29 to 232
	Braided PTFE	-20 to 500	-29 to 260
	PTFE w/ fiber glass (PTFEG)	-20 to 500	-29 to 260
	PTG-XT	-20 to 550	-29 to 288
	Graphite/AFP ⁽³⁾	-20 to 750	-29 to 400
	Graphite/AFP ⁽³⁾ with Inconel wire	-20 to 750 ⁽⁴⁾	-29 to 400 ⁽⁴⁾
	Graphite ⁽⁵⁾	-20 to 750 ⁽⁴⁾	-29 to 400 ⁽⁴⁾
Extended ⁽¹⁾	PTFE Vee Ring	-150 to 600	-100 to 316
	PT and PTG	-20 to 600	-29 to 316
	Braided PTFE	-150 to 600	-100 to 316
	PTFE w/ fiber glass (PTFEG)	-150 to 600	-100 to 316
	PTG-XT	-20 to 700	-29 to 371
	Graphite/AFP ⁽³⁾	-20 to 1200	-29 to 650
	Graphite/AFP ⁽³⁾ with Inconel wire	-20 to 1200	-29 to 650
	Graphite ⁽⁵⁾	-20 to 1500	-29 to 815
Criogenics ⁽¹⁾	PTFE, with 15 or 18 inches extension	-320	-196
	PTFE, with 24 or 27 inches extension	-425	-253

⁽¹⁾ The ANSI B16.34 standard specifies acceptable pressure and temperature limits for pressure retaining materials. Contact the manufacturer for additional information on pressure/ temperature limits of the packing materials. ⁽²⁾ Acceptable limits once the pressure/temperature limits of the valve body, bonnet and components are respected. ⁽³⁾ Asbestos free packing. ⁽⁴⁾ For diameters of 8 to 12 inches, the maximum temperature limit is 850°F (454°C). ⁽⁵⁾ Do not use graphite above 750°F (400°C) in oxidizing service such as air or oxygen. The use of graphite packing may require oversize actuators or heavier springs due to added friction.

Temperature and Pressure Guides Limitation

Guide Materials	Temperature Limits		Pressure Limits
	°F	°C	
Stainless Steel Graphite Lined ⁽¹⁾⁽²⁾	-320 to 1500 ⁽³⁾	-196 to 815 ⁽³⁾	Up to 1000 psi (69.0 Bar) up to 2 in.
			Up to 600 psi (41.4 Bar) to 3 and 4 in.
			Up to 500 psi (34.5 Bar) to 6 in. and bigger
Stainless Steel PTFEG Lined	-20 to 300	-28 to 150	850 psi @ 100°F (58.6 Bar to 38°C); 100 psi to 300°F (6.9 Bar @ 150°C)
Bronze (Solid Guide) ⁽⁴⁾	-425 to 500 ⁽⁵⁾	-253 to 260 ⁽⁵⁾	Same as Body
Alloy #6 (Solid Guide) ⁽⁶⁾	-425 to 1500	-253 to 815	Same as Body

⁽¹⁾ For any diameter, the valve ΔP admissible limit should be complied. Contact the manufacturer. ⁽²⁾ Do not use in oxygen rich services. When using in cavitation regime, the use of graphite lining lower guides is not recommended. ⁽³⁾ For oxidizing or air services, the maximum service temperature is 800°F (426°C). ⁽⁴⁾ Bronze solid guides should not be used in corrosive applications or where the NACE certification is required. ⁽⁵⁾ For the upper guide, the temperature limit is 900°F (482°C). ⁽⁶⁾ Valves assembled with 300 series stainless steel trims and Alloy #6 inferior guide , the plug Guides and Packing Set stem must be hardened with Alloy #6 application at the area in contact with the guide.

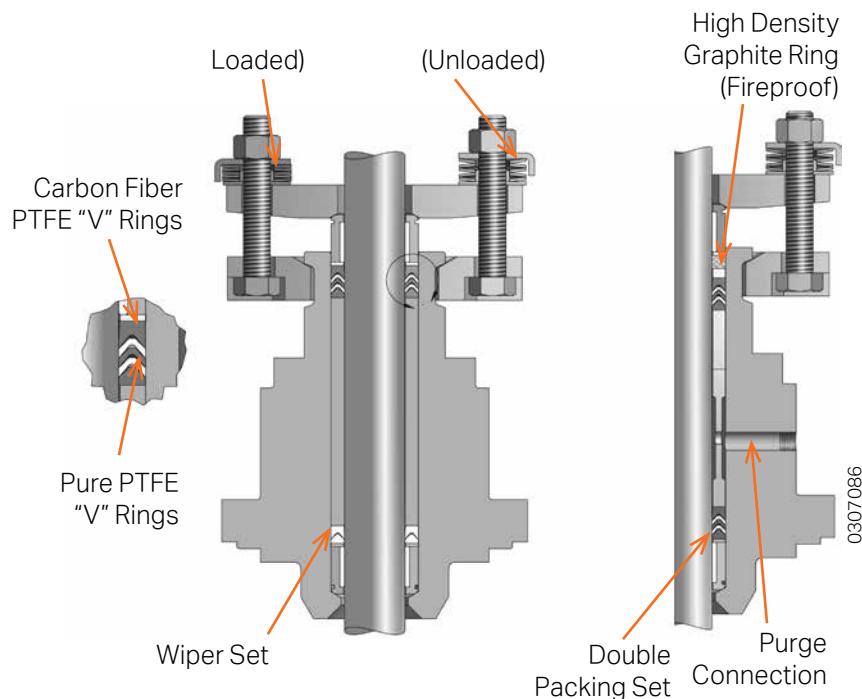

GLs - Body Subassembly Fugitive Emissions Control

PT Packing set

The GLs Series PT packing set meets EPA* regulations in reference to fugitive emissions.

Composed of pure PTFE "V" rings combined with carbon fiber PTFE "V" rings, the PT packing set is compressed by a set of spring washers that causes a "live-loaded effect" and it is available for most of ValtekSul control valves, ensuring emissions levels lower than 500 ppm.

With a simple and easy to replace setting, the PT packing reduces the need for packing retighten caused by temperature and pressure variations. A fireproof version of the PT packing set is available as option, which ensures stem tightness even facing the damages that the excess heat can cause to the "V" rings.

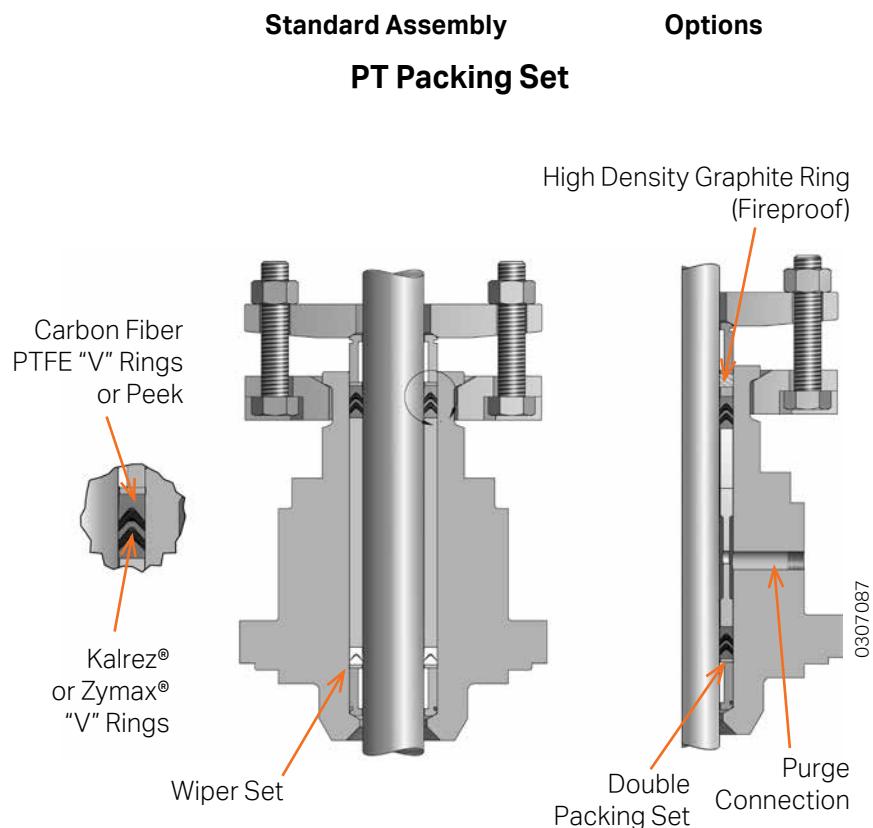

PTG and PTG-XT Packing Set

When the service temperature exceeds the required limits for PT packing or when it is expected greater reliability, the PTG packing is the ideal choice.

In response to EPA's regulations, the PTG packing ensures emissions even lower than 500 ppm (usually 10 ppm), making it a highly reliable and economic option to the use of metal sealed bellows. The PTG packing set can be assembled in all ValtekSul valves, providing longer service life with reduced need for packing retighten.

Optionally, the PTG packing can be supplied in a fireproof version, according to the API 607 standards. For higher service temperatures, the PTG XT version is indicated, the application limits are recorded in table IV.

* EPA = Environmental Protection Agency

GLs - Body Subassembly

Seat Rings, Trim

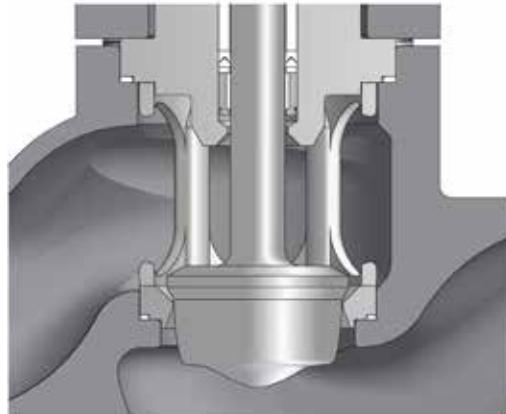

Trim

The GLs Series trims are designed to avoid the difficulties associated with screwed-in seats and cage-guiding. The seat ring is not screwed-in but clamped into the body by the bonnet and seat retainer; thus its removal is simple, even when the valve is under extremely corrosive conditions.

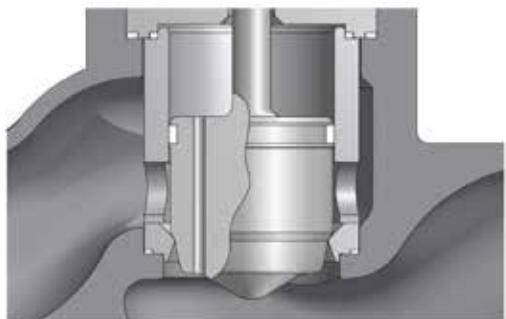

Unlike cage-guided trims that easily gall and stick, GLs trims are guided by a double-stem system, avoiding contact between the seat retainer and plug; allowing the retainer to be constructed of stainless steel, rather than other hardened materials of high cost. In the GLs Series, the stroke characteristic is determined by the plug shape, rather than by the opening in the seat retainer. For services with high-pressure drops, balanced trims are used to reduce the thrust necessary to stroke the plug by reducing the trim unbalanced areas.

The balanced trims can only be used in clean services; as the flow direction for fail-closed is under-the-plug and for fail-open is over-the-plug.

As an option, the GLs Series can be supplied with special trims for noise reductions and for cavitation regime services.

Unbalanced Trims

Balanced Trims

Balanced Plugs Seal Rings Materials Specification

Plugs Seal Rings Materials ⁽¹⁾	Temperature Limits ⁽²⁾		Sealing	
	°F	°C	Metal Seat	Soft Seat
PTFE Rings	0 to 350	-18 to 176	Up to 10% of Class IV	Up to 1% of Class IV
Reinforced PTFE O-Ring	0 to 400	-18 to 204	Up to 10% of Class IV	Up to 1% of Class IV
Buna N, O-Ring	-40 to 200	-40 to 93	Class IV or V	Class VI
Viton A, O-Ring	-10 to 400	-23 to 204	Class IV or V	Class VI
VMG from 2 to 4 inches	300 to 1600	149 to 871	Class III	N/A
VMG 6 inches and bigger	300 to 1600	149 to 871	Class IV	N/A

⁽¹⁾ When using VMG seal rings, the balanced retainer should be manufactured in hardened material. ⁽²⁾ Temperatures above are for guidance only. Contact ValtekSul to confirm the maximum temperature admitted in relation to the service pressure.

Metal Seat Rings

The standard GLs valve setting, with unbalanced trims and metal seat ring, handles Class IV shutoff (ANSI B16.104/FCI 70.2), which calls for maximum permissible seat leakage of 0.01% of rated valve capacity.

The exceptional tightness of the GLs Series is achieved due to the self-aligning seat ring design. As an option, metal seat valves can be supplied for additional seat tightness.

Soft Seat Rings

Soft seats are used in applications that require extra tightness, according to ANSI Class VI (B16.104/FCI 70.2). The GLs Series soft seat set consists of a polymer placed between two metal pieces, and it is interchangeable with the metal seat. Inserts are often manufactured of PTFE; therefore, the maximum temperature and pressure should be 300°F @ 290 psi (150°C @ 20 Bar). For temperatures below -85°F (-65°C), PTFE soft seats can be used in high-pressure applications.

GLs Series - Seat Rings Options

GLs - Body Subassembly

Seat Rings, Trim

Standard material for GLs Series plug, seat ring and seat retainer is 316 stainless steel, except for special alloy valves where trims are manufactured with the same material as the body.

A wide variety of fluid is suitable to 316 stainless steel trims. Still, the general rule is that hardened trims should be employed for all conditions of critical flow or for temperatures above 60°F (316°C). For these cases, ValtekSul keeps a large stock of Alloy #6 trims, a material that offers a good combination of hardness and corrosion resistance. Special alloys, such as Alloy 20, Monel, Hastelloy C, Hastelloy B and others are also available under request.

GLs - Body Subassembly Flow Characteristics

Equal Percentage

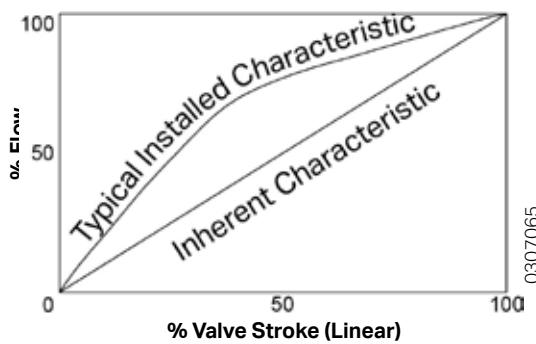

Equal Percentage is the characteristic most commonly used in process control. The change in flow per unit of valve stroke is directly proportional to the flow occurring just before the change is made.

When installed, a valve with Equal Percentage characteristic will produce in most control loops a characteristic that approaches Linear when the overall system pressure drop is big in relation to that of the valve.

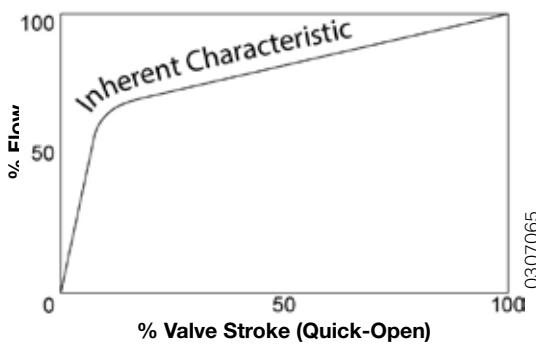

Linear

The Linear characteristic produces equal changes in flow per unit of valve stroke, despite of the plug position. Linear plugs are used on those systems where the valve pressure drop is a major portion of the total system pressure drop.

Quick-open

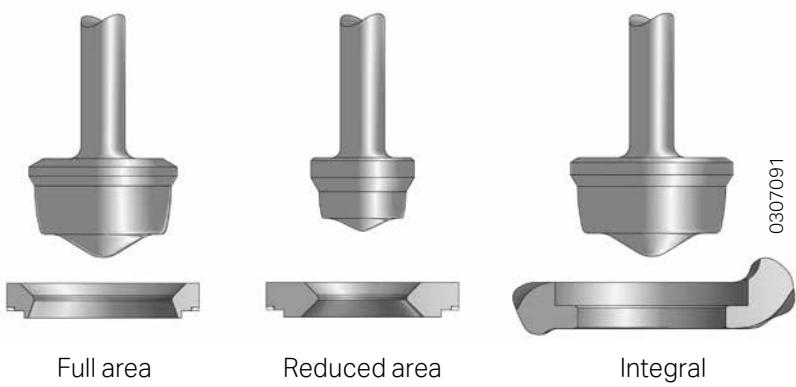

Quick-open plugs are used for on-off service and are designed to produce maximum flow increase, as earlier as the small opening percentage.

Trims size

Two trim options are normally available: the standard, with full passage area, and another with reduced passage, available in a variety of sizes, and requested when C_v values are relatively lower for a specific body size that will be used. Besides these options, an Integral trim can be supplied, which uses a special seat machined to the valve body and an oversized plug to provide higher C_v than the one provided by the full-area trim.

As the GLs trims are completely interchangeable for a determined body diameter and pressure class, trim size and nominal C_v alteration is a simple operation.

General Specification Chart

GLs Series - Specification & Manufacturing Materials

Body	Diameter	0.5 to 36 inches
	ANSI Class	150, 300 and 600
	Styles	Globe, Angle, 3-way or steam-jacketed versions
	Manufacturing Materials	Carbon steel, Stainless steel, Chrome-Moly, Duplex, Super-Duplex, Alloy #20, Bronze, Monel, Hastelloy B, Hastelloy C, Nickel, Titanium and other castable materials under request.
	Connections	Separable Flanges (0.5 to 4 inches) Integral Flanges (all sizes) Screwed (NPT) (0.5 to 2 inches) Socketweld, SW (0.5 to 4 inches) Buttweld, BW (all sizes) Grayloc (all sizes)
	Separable Flanges	Carbon steel, 316 Stainless steel and other materials under request
	Gaskets	Flat PTFE, PTFEG*, KEL-F
		Spiral AISI-316 or 304 with graphite filling or others materials Asbestos free (AFG)
		O-Rings Inconel X-750 with silver coating
Bonnet	Types	Plain; Standard extended; Cryogenic
	Materials	Same body options
	Bonnet flanges	Carbon steel or Stainless steel 316 separable flanges
	Guides	Types Double upper guide on the valve stem, out of flow stream
		Materials AISI-316 with PTFEG* lining or graphite, Bronze, Alloy #6 or other materials under request
	Packing set	Types Standard, "V" type or square rings, Double packing. Vacuum packing.
		Materials PTFE, PTFEG* "V" rings, Braided PTFE, AFP** with inconel wire, graphite and other materials under request.
Trim	Types	Unbalanced Balanced: With metal sealing rings. Balanced: With elastomers or polymers rings.
	Flow Characteristics	Equal Percent, Linear or Quick Open
	Materials	AISI-316 (standard), AISI-304, AISI-347, AISI-416, AISI-420, AISI-440C, 17-4PH, Duplex, Super-Duplex, Alloy #20, Monel, Hastelloy B, Hastelloy C, Nickel, Titanium and others.
	Superficial Hardening	Materials Alloy #6, Colmonoy #5 and other materials under request
		Types Seat surface hardening, Full seat surface and plug head hardening, Valve Stem hardening in the lower area guide
	Soft seats	Materials PTFE, PTFEG*, FEP, KEL-F, Polyurethane, PEEK
Actuator	Types	Pneumatic Double acting piston/cylinder, with spring for failure position. Field reversible and available in sizes 25, 50, 100, 200, 300, 400, 500 and 600. Options: manual handwheel, stroke limits and others (See actuators catalogue).
		Others Manuals. Electro-mechanical or Electro-Hydraulic under request.
Positioner	Types	Pneumatics: Analogical or Digital Electro-pneumatics with various communication protocols available.

* Reinforced PTFEG: PTFE with fiber glass. **AFP: Asbestos free packing.
