**VALTEK™
SULAMERICANA**

Globe Control Valve Body Subassembly

The GLH Series globe control valve was designed to be used in high pressure industrial processes. The GLH Series was developed as an extension of the wellknown GLs control valve project of ValtekSul, from which inherits advanced characteristics such as the self-aligning seat ring, the superior double guided system, the top-entry trims and the piston-cylinder actuators, among others.

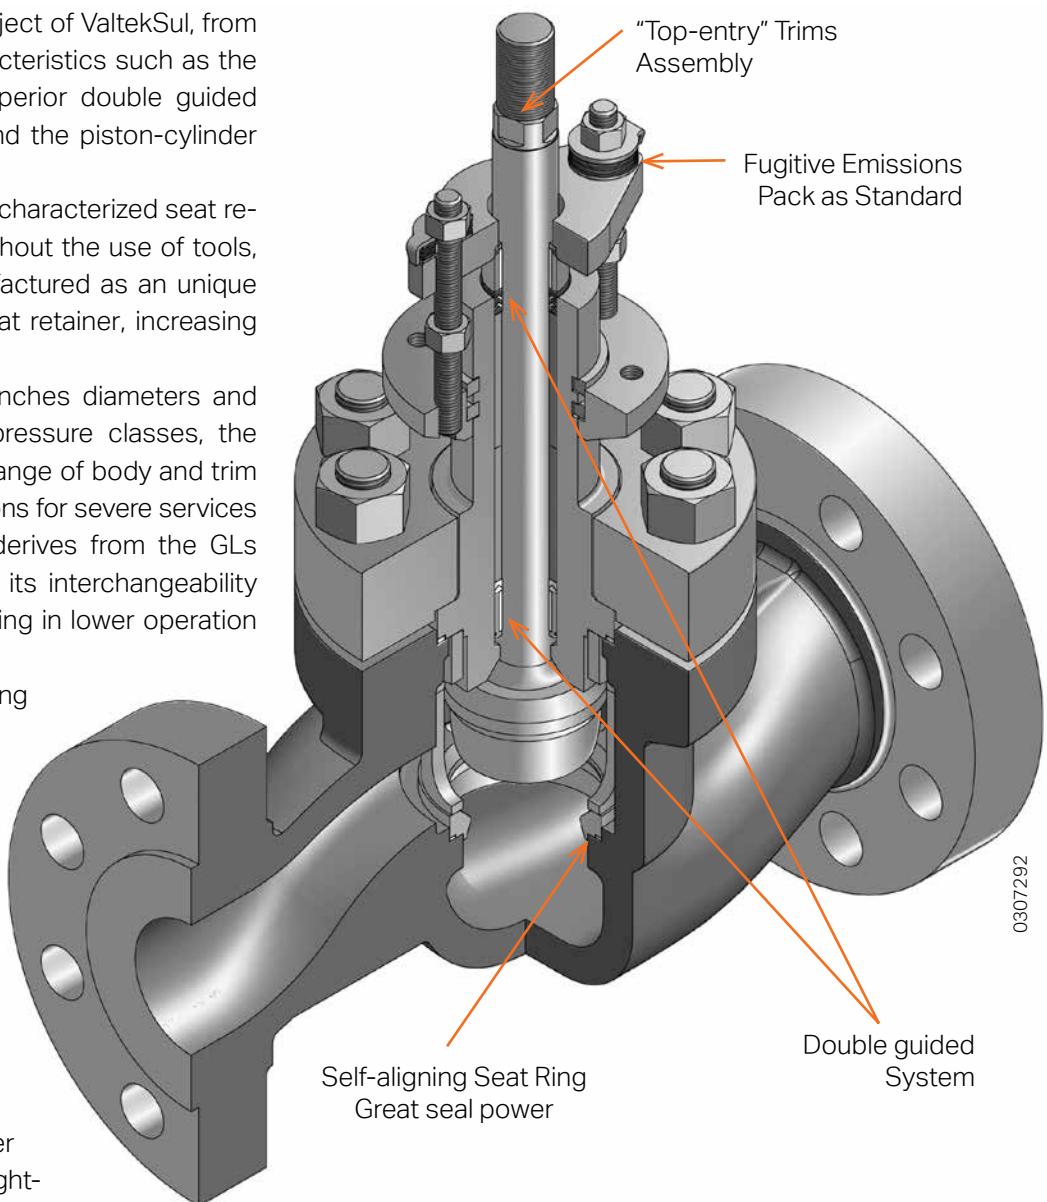

The seat ring is fixed by a non-characterized seat retainer and can be removed without the use of tools, while the plug, which is manufactured as an unique piece, is not guided by the seat retainer, increasing the trims lifespan.

Manufactured with 1 to 24 inches diameters and ANSI 900, 1500 and 2500 pressure classes, the GLH Series is available with a range of body and trim settings, and also special versions for severe services application. The GLH design derives from the GLs Series advantages, as well as its interchangeability and maintenance facility resulting in lower operation costs.

The GLH Series uses doubleacting piston-cylinder actuators, with a fail-safe spring, which provides additional pneumatic stiffness, excellent alignment precision, in throttling control, and fast and reliable replies to command signal variation.

The GLH Series actuators operate with supply air pressure of up to 150 psi (10.3 Bar), presenting an extra power rating to ensure the desired tightness, even when the valve operates with high pressure drop applications.

The options with Chronos digital positioners complete the high performance technological pack, establishing the GLH Series as the most renowned high-pressure control valve at the global market.

GLH Series - Body Sub-Assembly

Typical Rangeability 30:1

GL_H - Body Subassembly Body Styles

The GL_H Series globe bodies provide a smooth flow stream. Globe-style bodies feature smooth, streamlined, constant-area internal passages with no pockets, permitting high capacity with minimum turbulence. They are designed with nearly constant wall thickness, providing lower weight and cost when manufactured in expensive stainless or alloy steels.

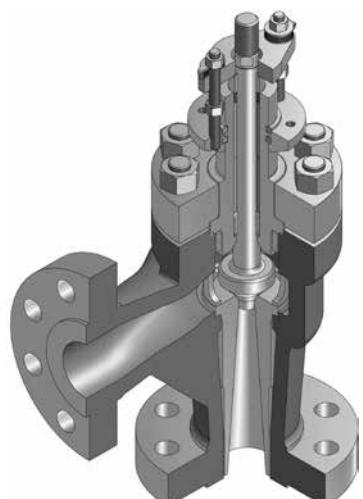

Angle-style Body

The angle-style body of the GL_H Series Valve is completely interchangeable with the conventional globe style, all other valve parts remain the same. Depending on the application it will be used for, the GL_H angle-style body valve can be supplied with a special Venturi seat ring, which extends to the outlet flange providing additional protection against corrosive flow.

GL_H - Body Subassembly Advantages and Features

In the GL_H Series, intelligent project design translates into performance and greater operational advantages:

Strength

The GL_H valve is more resistant to fluid corrosion when compared to conventional globe valves.

The heavy-duty plug stem, as well as the other valve components, was designed for severe services and can operate on high-pressure drops.

When required, the valves can be supplied with anti-cavitation and noise-trim options.

As a result of using this advanced guiding system, the heavy duty GL_H valve plug stem can be submitted to twice the force produced by the oversized actuators available, without the risk of buckling.

The GL_H Series packing box great depth allows the use of all packing available at ValtekSul, while the perfect finishing of the bonnet's inner area and plug stem provides longer service life of the packing, without leaks.

Sealing

Besides providing precise control, the GL_H valve design with self-aligning seat ring also provide exceptional sealing, which is reinforced by the flow pressure. With normal air supply, the piston-cylinder actuator guarantees tight shutoff, while in airless condition the actuator spring and the flow thrust drive the plug into desired fail position.

Trims that do not stick

The superior double-stem guiding system, located out of flow stream, ensures perfect alignment of the plug stem, at the same time that provides a generous clearance between plughead and seat retainer, eliminating galling associated with cage-guiding.

Easy, fast and inexpensive maintenance

Top-entry trims service. Once the bonnet flange nuts are taken out, the bonnet and plug can be removed from the valve, clearing the access to other internal components.

The seat ring, fitted and fixed by the retainer, can be dismantled and reassembled without the use of tools, as well as all the other valve and actuator components.

Versatile

Besides the conventional globe bodies, angle-style and special version bodies are available to meet all needs of the continuous process industries.

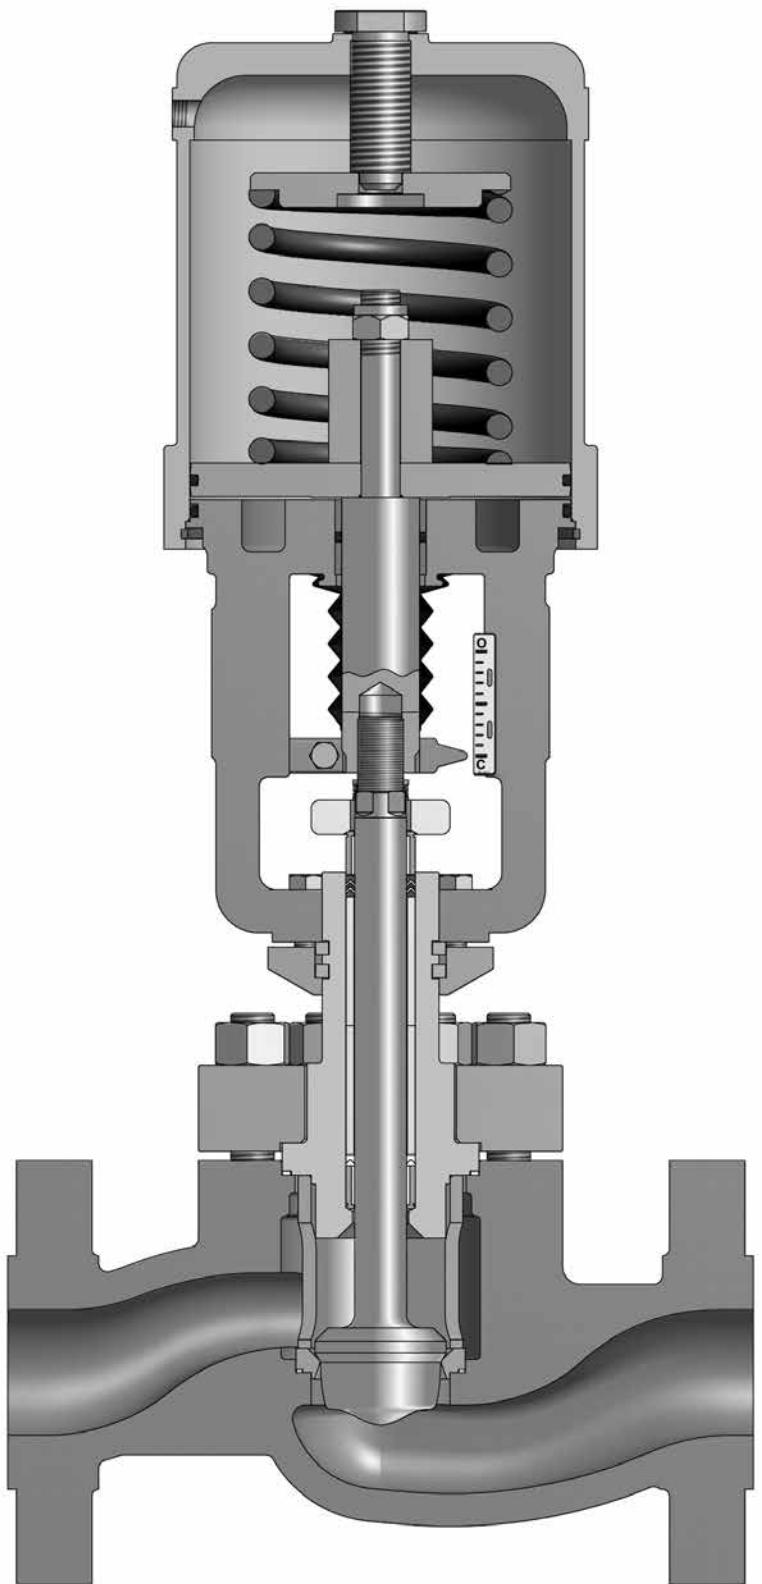

The modular concept of the design ensures high degree of interchangeability between the different versions and diameters, substantially reducing the need of spare parts.

The GL_H valve has the largest diameter among the ones available on the market.

Guiding and Packing

The GL_H Series guiding system deserves a special mention. In addition to eliminating the disadvantages of the guiding system at the seat retainer, the GL_H Series guides are widely spaced and display a large supporting surface, eliminating vibration related problems in control valves.

GLH - Body Subassembly Additional Advantages

Piston-cylinder actuators – Advantages:

- » High thrust cylinder actuator and pneumatic stiffness
- » Field reversible, no need for spare parts
- » Trustworthy operation
- » Smaller than spring-cylinder actuators of similar force
- » Controlled high speed
- » Accurate positioning, with faithful response
- » High repeatability
- » Allows the assembly of various types of positioners and parts
- » Optionally can be supplied with various types of manual handwheels and limit stops
- » Admits supply air pressure of up to 150 psi (10.3 Bar), without the need of a pressure regulator

GLH Control Valve

0307296

GLH - Body Subassembly Connections, Flanges, Bolts

As standard, the GLH Series valves are supplied with integral flanges and raised face. To achieve better sealing with mating piping, the flange face is machined with spiral grooved serration. Other optional facings include smooth face, flat face, ring-joint, large and small tongue and large and small groove.

End connections as the Socketweld, Butt weld and Screwed (NPT) are available as option.

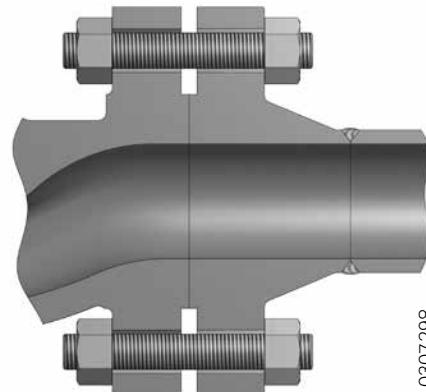

Bonnet flange

The GLH Series bonnet flange is separable, that means, it is not connected to the bonnet. As the operation fluid does not get in contact with the bonnet flange, it is normally manufactured in carbon steel; however, it can be specified in stainless steel when the operation temperature or pressure requires.

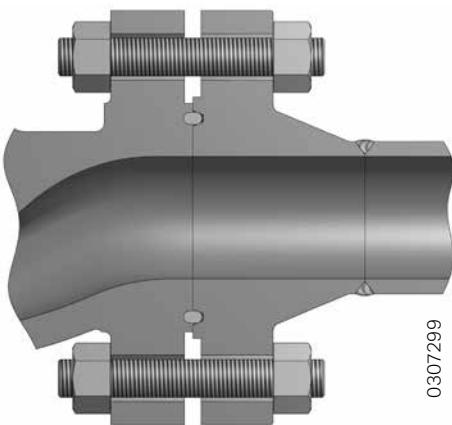

Bonnet Flange Assembly

The GLH Series standard bonnet is assembled to the body using stud bolts and nuts. The studs standard material is the ASTM A193 Gr. B7 and the nuts material is the ASTM A 194 Gr. 2H, suitable for -20 to 800°F (-28 to 426°C).

Optionally, the stud bolts and nuts can be furnished in stainless steel, supporting temperatures of -425 to 1500°F (-253 to 815°C). These temperature limits are for maximum pressure permitted by ANSI B16.34, latest edition.

Integral Flanges

RTJ Flange

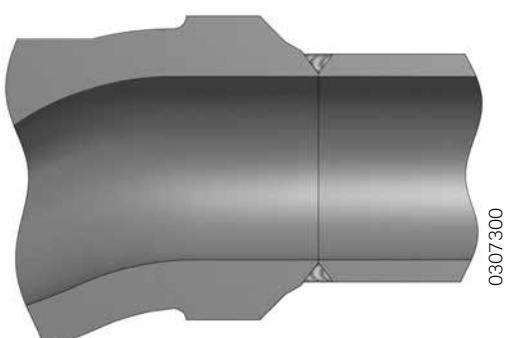

End Connections

| End Connection | Valve Nominal Diameter (in.) | ANSI Standard | (ANSI/ISA) Face-to-Face Standard |
|------------------------|------------------------------|---------------|----------------------------------|
| Integral Flange | 1 to 24 | 900-2500 | 75.08.01 ⁽¹⁾ |
| Screwed (NPT) | 1 to 2 | 900-2500 | 75.08.03 ⁽²⁾ |

| Buttweld | 1 to 24 | 900-2500 | 75.08.05 ⁽²⁾⁽³⁾ |

⁽¹⁾ For diameters larger than 16 in., face-to-face dimension will follow Valtek Sulamericana standard.

⁽²⁾ Long pattern.

⁽³⁾ For diameters larger than 16 in., face-to-face dimension will follow Valtek Sulamericana standard.

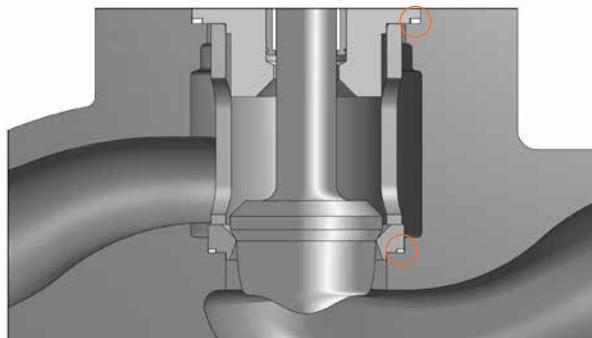

Buttweld

GLH - Body Subassembly

Gaskets, Clamps

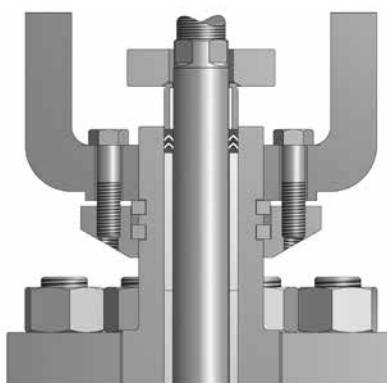

Gaskets

The GLH Series was designed with the bonnet and the seat ring gaskets fully retained. The valve bonnet has a step that acts as mechanic stop and limits gasket compression. In this way, the bonnet gasket remains completely sealed and its compression is determined by the gasket step on the bonnet. The body, seat retainer and seat ring are all machined with close tolerances to provide proper gasket compression. Unlike the bonnet, the seat ring does not always bottom in the body (metal-to-metal), allowing this small clearance to compensate for manufacturing tolerances and thermal expansion.

| Standard Gaskets | Flat | PTFE | -200 to 350 | -130 to 177 | 6000 psi @ -200°F (415 bar @ -130°C) / 1000 psi @ 350°F (69 bar @ 177°C) |
| | Spiral-wound | SS 304/AFG ⁽²⁾ | -20 to 750 | -29 to 400 | 6250 psi (430 bar) |
| | Spiral-wound | SS 316/AFG ⁽²⁾ | -320 to 1000 ⁽¹⁾ | -196 to 538 ⁽¹⁾ | 6250 psi (430 bar) |
| Alternate Gaskets | Flat | AFG ⁽²⁾ | -20 to 600 | -29 to 315 | CF ⁽³⁾ |
| | Flat | KEL-F ⁽⁴⁾ | -320 ⁽⁴⁾ to 350 | -196 ⁽⁴⁾ to 177 | CF ⁽³⁾ |
| | Flat | PTFEG | -200 to 450 | -130 to 232 | 6000 psi @ -200°F (415 bar @ -130°C) / 500 psi @ 450°F (35 bar @ 232°C) |
| | Spiral-wound | SS 316/Graf. ⁽¹⁾ | -320 ⁽⁴⁾ to 1500 ⁽¹⁾ | -196 to 815 ⁽¹⁾ | 6250 psi (431 bar) |
| | O-Ring Oco | Inconel X-750 | -20 to 1500 | -29 to 815 | 15000 psi (1034 bar) |

⁽¹⁾ Limited to 800°F (426°C) for oxidizing service. ⁽²⁾ Gasket material asbestos free. ⁽³⁾ Contact ValtekSul for information on pressure limits according to material.

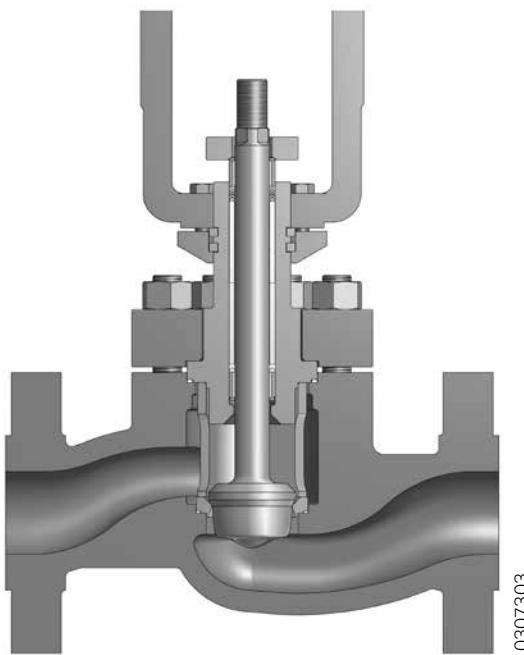

⁽⁴⁾ Lower temperatures available upon request.

GLH - Body Subassembly

Bonnet Types

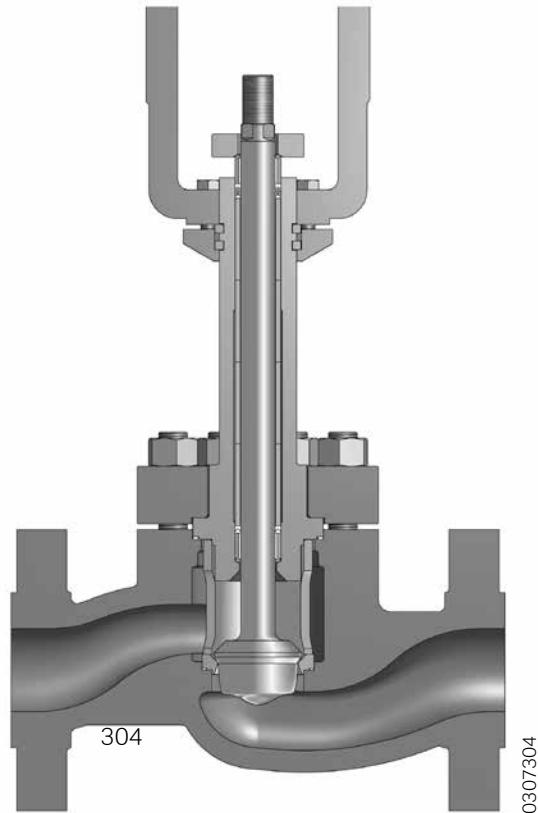

Standard bonnet

The GLH Series standard bonnet is usually constructed of the same material as the body and handles temperatures from -20 to 800°F (-28 to 426°C), depending on the packing material (See page 10 for temperature limits for different materials).

Extended Bonnet

The extended bonnet protects the packing from excessive heat or cold, which may inhibit valve performance. The bonnet is constructed of carbon steel for temperatures from -20 to 800°F (-28 to 426°C), while the extended bonnet of 304 or 316 stainless steel can handle temperatures from -150 to 1500°F (-100 to 815°C).

GLH Series Bonnet Types

Bonnet Flange and Studs Materials

| Bonnet Flange (Standard) | Bonnet Flange (Optional) | Studs and Bolts (Standard) | Studs and Bolts (Optional) |
|-----------------------------|--|---|--|
| Carbon Steel | Stainless Steel ⁽¹⁾ or the body material | ASTM A193 Gr. B7 / ASTM A194 Gr. 2H ⁽²⁾ | 304 Stainless Steel or 316 Stainless Steel ^{(1) (3) (4)} |

⁽¹⁾ The optional materials for the flange and the bonnet assembly elements are required when the temperature and pressure limits of the carbon steel and the assembly elements in B7/2H are exceeded. ⁽²⁾ Temperatures from -20 to 800°F (-28 to 426°C), provided that the body class pressure is complied. ⁽³⁾ Temperatures from -425 to 1500°F (-253 to 815°C), provided that the body class pressure is complied.

GLH - Body Subassembly Packing and Guides

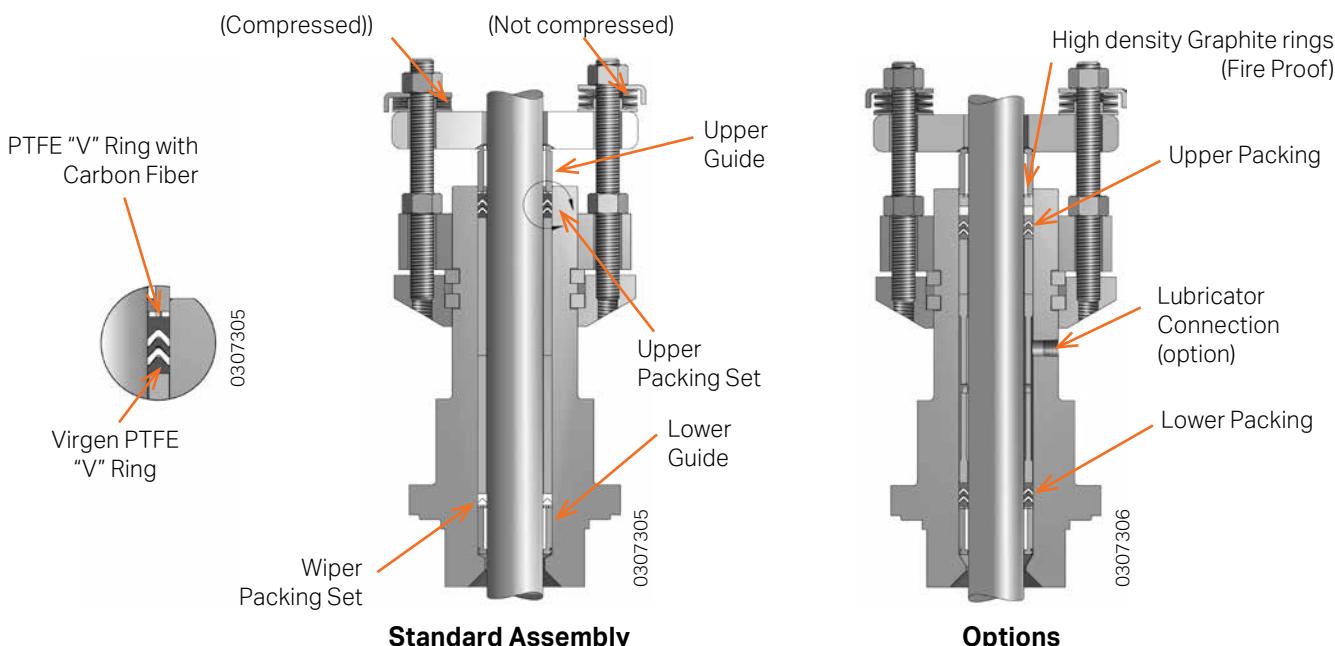

Packing Box

The GLH valve packing box is deep and presents perfect superficial finishing, allowing the assembly of all ValtekSul standard packing options, with the following additional advantages:

1. The fugitive emissions safe packing type PT comes as standard for the GLH valve.
2. The spacing between the wiper set and the main upper packing set prevents contact with the wet parts of the plug stem.
3. Eliminate galling generally associated to the guide system at the seat retainer (cage).
4. Two widely spaced guides, placed out of the flow

stream, combined to the plug stem, form the advanced guiding system of the GLH Series. The upper packing also acts as gland packing, and the lower guide is situated close to the plug head, ensuring accurate alignment of plug and seat ring.

5. The variety of available guides cover all applications of the GLH valves.

GLH - Guides and Standard Packing Set Typical Arrangement

Temperature and Pressure Guides Limitation

| Guide Materials | Temperature Limits | | Pressure Limits |
|---|-----------------------------|----------------------------|--|
| | °F | °C | |
| Stainless Steel Graphite Lined ⁽¹⁾⁽²⁾ | -320 to 1500 ⁽³⁾ | -196 to 816 ⁽³⁾ | Up to 1000 psi (69 bar) up to 2 in. Up to 600 psi (41.4 bar) to 3 and 4 in. Up to 500 psi (34.5 bar) to 6 in. and bigger |
| Stainless Steel PTFEG Lined | -423 to 350 | -253 to 177 | 850 psi @ 100°F (58.6 bar @ 38°C); 100 psi @ 300°F (6.9 bar @ 150°C) |
| Bronze (Solid Guide) ⁽⁴⁾ | -423 to 500 ⁽⁵⁾ | -253 to 260 ⁽⁵⁾ | Same as Body |
| Alloy #6 (Solid Guide) ⁽⁶⁾ | -423 to 1500 | -253 to 816 | Same as Body |

⁽¹⁾ For any diameter, the valve ΔP admissible limit should be complied. Contact ValtekSul ⁽²⁾ Do not use in oxygen rich services. When using in cavitation regime, the use of graphite lining lower guides is not recommended. ⁽³⁾ For oxidizing or air services, the maximum service temperature is 800°F (426°C). ⁽⁴⁾ Bronze solid guides should not be used in corrosive applications or where the NACE certification is required. ⁽⁵⁾ For the upper guide, the temperature limit is 900°F (482°C). ⁽⁶⁾ Valves assembled with stainless steel trims of 300 series and inferior guide in Alloy #6, the plug stem must be hardened with Alloy #6 application at the area in contact with the guide.

GLH - Body Subassembly Fugitive Emissions Control

PTG and PTG-XT Packing Set

When the service temperature exceeds the required limits for PT packing or when it is expected greater reliability, the PTG packing is the ideal choice.

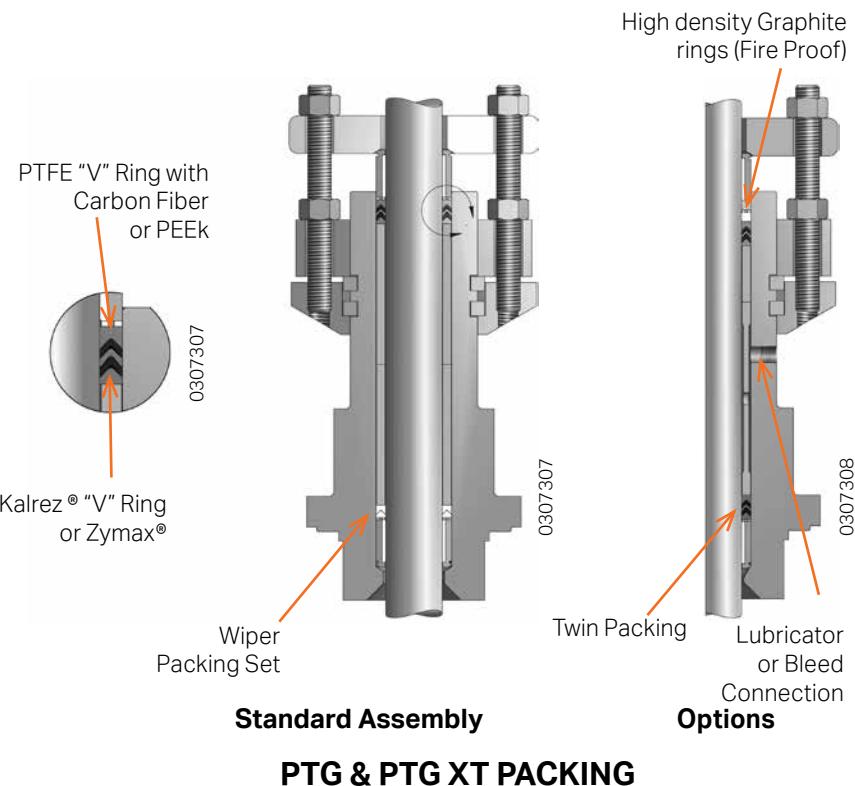

In response to EPA's regulations*, the PTG packing ensures emissions even lower than 500 ppm (usually 10 ppm), making it a highly reliable and economic option to the use of metal sealed bellows.

The PTG packing set can be assembled in all ValtekSul valves, providing longer service life with reduced need for packing retighten.

Optionally, the PTG packing can be supplied in a fireproof version, according to the API 607 standards.

For higher service temperatures, the PTG XT version is indicated, the application limits are recorded in table IV.

*EPA = Environmental Protection Agency

PTG & PTG XT PACKING

Packing Set Temperature Limitation

| Bonnet Type | Packing Material | Fluid Temperature Limitation ⁽²⁾ | |
|--------------------------------|---|---|---------------------------|
| | | °F | °C |
| Standard ⁽¹⁾ | PTFE "V" Ring | -20 to 450 | -29 to 232 |
| | PT and PTG | -20 to 450 | -29 to 232 |
| | Braided PTFE | -20 to 500 | -29 to 260 |
| | PTFE w/ fiber glass (PTFEG) | -20 to 500 | -29 to 260 |
| | PTG XT | -20 to 550 | -29 to 288 |
| | Graphite/AFP ⁽³⁾ | -20 to 800 | -29 to 427 |
| | Graphite/AFP ⁽³⁾ with Inconel wire | -20 to 800 ⁽⁴⁾ | -29 to 427 ⁽⁴⁾ |
| | Graphite ⁽⁵⁾ | -20 to 800 ⁽⁴⁾ | -29 to 427 ⁽⁴⁾ |
| Extended ⁽¹⁾ | PTFE "V" Ring | -150 to 700 | -101 to 371 |
| | PT and PTG | -20 to 600 | -29 to 315 |
| | Braided PTFE | -150 to 600 | -101 to 315 |
| | PTFE w/ fiber glass (PTFEG) | -150 to 700 | -101 to 371 |
| | PTG XT | -20 to 800 | -29 to 427 |
| | Graphite/AFP ⁽³⁾ | -20 to 1200 | -29 to 650 |
| | Graphite/AFP ⁽³⁾ with Inconel wire | -20 to 1200 | -29 to 650 |
| | Graphite ⁽⁵⁾ | -20 to 1500 | -29 to 816 |

⁽¹⁾ The ANSI B16.34 standard specifies acceptable pressure and temperature limits for pressure retaining materials. Contact ValtekSul for additional information on pressure/temperature limits of the packing materials.⁽²⁾ Acceptable limits once the pressure/temperature limits of the valve body, bonnet and components are respected.

⁽³⁾ Asbestos free packing. ⁽⁴⁾ For diameters of 3 to 12 inches, the maximum temperature limit is 850°F (454°C). ⁽⁵⁾ Do not use graphite above 750°F (400°C) in oxidizing service such as air or oxygen. The use of graphite packing may require oversize actuators or heavier springs due to added friction.

GL_H - Subassembly Seat Rings, Trim

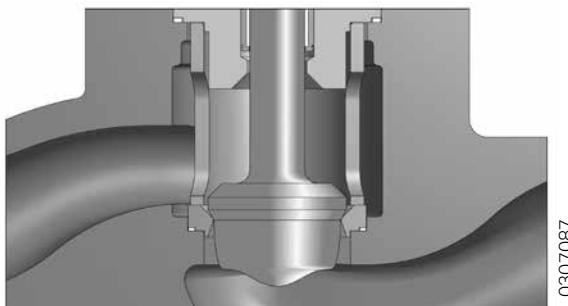

Trim

The GL_H Series trims are designed to avoid the difficulties associated with screwed-in seats and cage-guiding. The seat ring is not screwed-in but clamped into the body by the bonnet and seat retainer, thus its removal is easy, even when the valve is under extremely corrosive conditions.

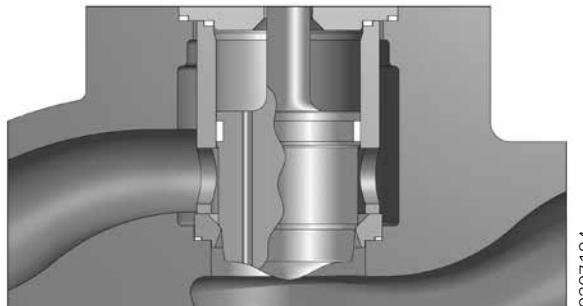

Unlike cage-guided trims that easily gall and stick, GL_H plugs are guided by a double-stem system, avoiding contact between the seat retainer and plug, allowing the retainer to be constructed of stainless steel, rather than other hardened materials of high cost.

In the GL_H Series, the flow characteristic is determined by the plug contour, rather than by the opening in the retainer.

For services with high-pressure drops, pressure-balanced trims are used to reduce the thrust necessary to stroke the plug by reducing the trim off-balance area. The pressure balanced trims can only be used in clean services, as the flow direction for fail-closed is under-the-plug and for fail-open is over-the-plug. As an option, the GL_H Series can be supplied with special trims for noise reductions and for cavitation regime services.

Unbalanced Trim

Pressure Balanced Trim

Pressure Balanced Plugs Seal Rings Materials Specification

| Plugs ⁽¹⁾ | Temperature Limits | | Sealing | |
|-------------------------------|----------------------------|-------------|-----------------------|----------------------|
| | °F | °C | Metal Seat | Soft Seat |
| PTFE Rings | 0 to 350 | -18 to 176 | Up to 10% of Class IV | Up to 1% of Class IV |
| Reinforced PTFE O-Ring | 0 to 400 | -18 to 204 | Up to 10% of Class IV | Up to 1% of Class IV |
| Buna N , O-Ring | -40 to 200 | -40 to 93 | Class IV or V | Class VI |
| Viton A , O-Ring | -40 to 437 | -40 to 225 | Class IV or V | Class VI |
| VMG | from 2 to 4 inches | 300 to 1600 | 149 to 871 | Class III |
| | 6 inches and bigger | 300 to 1600 | 149 to 871 | N/A |

⁽¹⁾ When using VMG seal rings, the balanced retainer should be manufactured in hardened material. ⁽²⁾ Temperatures above are for guidance only. Contact ValtekSul to confirm the higher admitted temperature in relation to the service pressure.

Metal Seat Rings

The standard GL_H valve setting, with unbalanced trims and metal seat ring, handles Class IV shutoff (ANSI B16.104/FCI 70.2), which calls for maximum permissible seat leakage of 0.01% of rated valve capacity. The exceptional tightness of the GL_H Series is achieved due to the self-aligning seat ring design. As an option, metal seat valves can be supplied for additional seat tightness.

Soft Seat Rings

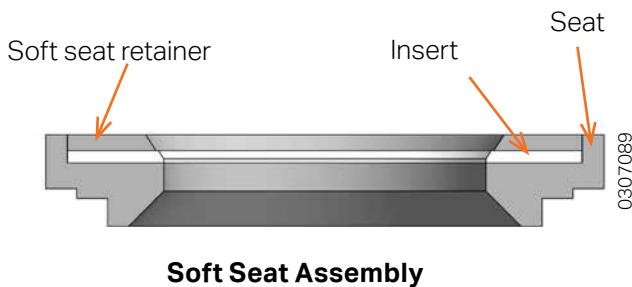

Soft seats are used in applications that require extra tightness, according to ANSI Class VI B16.104/FCI 70.2. GL_H Series soft seat set consists of an elastomer placed between two metal pieces, and it is interchangeable with the metal seat. Inserts are often manufactured of PTFE, therefore, the maximum temperature and pressure should be 300°F @ 290 psi (150°C @ 20 Bar). For temperatures below -85°F (-65°C), soft seats can be used in highpressure applications.

GLH Body Subassembly

Seat Rings, Trim

Standard material for GLH Series plug, seat ring and seat retainer is 316 stainless steel, except for special alloy valves where trims are manufactured with the same material as the body. A wide variety of fluid is suitable to 316 stainless steel trims. Still, the general rule is that hardened trims should be employed for all conditions of critical flow or for temperatures above 600°F (316°C).

Seat Rings

For this cases, ValtekSul keeps a large stock of Alloy #6 trims, a material that offers a good combination of hardness and corrosion resistance. Special alloys, such as Alloy #6, Monel, Hastelloy C, Hastelloy B and others are also available.

GLH Body Subassembly Flow Characteristics

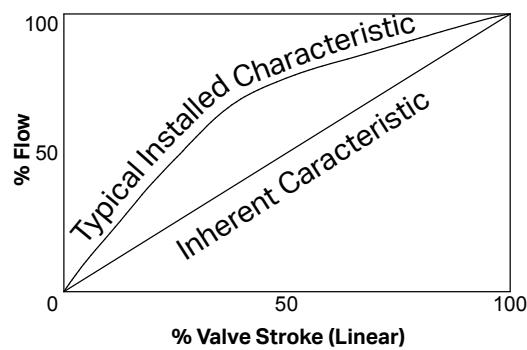

Equal Percentage

Equal Percentage is the characteristic most commonly used in process control. The change in flow per unit of valve stroke is directly proportional to the flow occurring just before the change is made. When installed, a valve with Equal Percentage characteristic will produce in most control loops a characteristic that approaches Linear when the overall system pressure drop is large in relation to that of the valve.

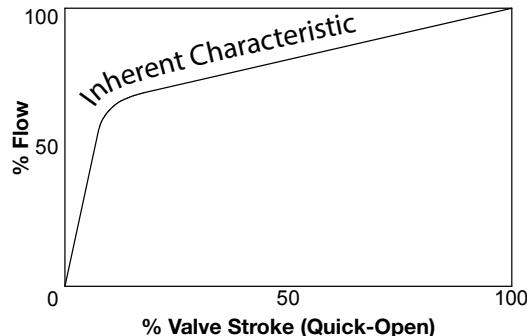

Linear

The Linear characteristic produces equal changes in flow per unit of valve stroke, despite of the plug position. Linear plugs are used on those systems where the valve pressure drop is a major portion of the total system pressure drop.

Quick-open

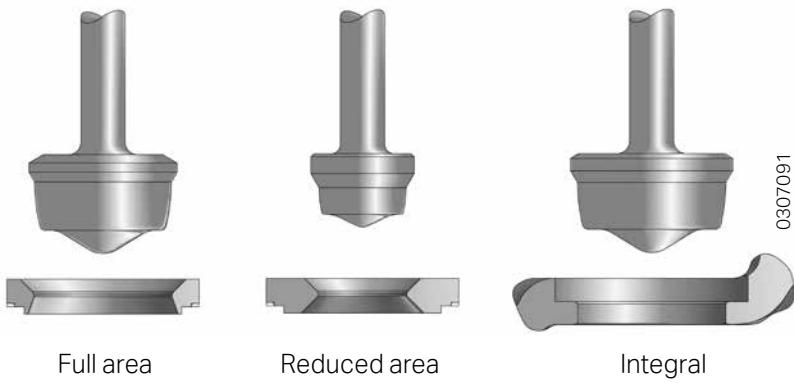

Quick-open plugs are used for on-off service and are designed to produce maximum flow increase, as earlier as the small opening percentage.

Trims size

Two trim options are normally available: the standard, with full passage area, and another with reduced passage, available in a variety of sizes, and requested when Cv values are relatively lower for a specific body size that will be used. Besides these options, an Integral trim can be supplied, which uses a special seat machined to the valve body and an oversized plug to provide higher Cv than the one provided by the full-area trim.

As the GLH trims are completely interchangeable for a determined body diameter and pressure class, trim size and nominal Cv alteration is a simple operation.

Trims Size

GLH Body Subassembly General Specification Chart

GLH Series - Specification & Manufacturing Materials

| | | |
|-------------------|--------------------------------|--|
| Body | Diameter | 1 to 24 inches |
| | ANSI Class | 900, 1500 and 2500 |
| | Styles | Globe, Angle, 3-way, special versions |
| | Manufacturing Materials | Carbon steel, Stainless steel, Chrome-Moly and other castable materials under request. |
| | Connections | Integral flanges (all sizes) NPT (1 to 2 inches) Socketweld, SW (1to 4 inches) Buttweld, BW (all sizes) Grayloc (all sizes) |
| | Gaskets | Flat PTFE, PTFEG*, KEL-F |
| | | Spiral AISI-316 or 304 with graphite filling or others materials Asbestos free (AFG) |
| | | O-Rings Inconel X-750 with silver coating |
| Bonnet | Types | Plain; Standard extended; Cryogenic |
| | Materials | Same body options |
| | Bonnet flanges | Carbon steel or Stainless steel 316 separable flanges |
| | Guides | Types Double upper guide on the valve stem, out of flow stream |
| | | Materials AISI-316 with PTFEG* lining or graphite, Bronze, Alloy #6 or other materials under request |
| | Packing set | Types Standard, "V" type or square rings, Double packing. Vacuum packing; Fugitive Emissions. |
| | | Materials PTFE , PTFEG* "V" rings, Braided PTFE , AFP** with inconel wire, graphite and other materials under request. |
| Trim | Types | Unbalanced Balanced: with metal sealing rings. Balanced: with elastomers or polymers rings. |
| | Flow Characteristics | Equal Percentage, Linear or Quick Open |
| | Materials | AISI-316 (standard), AISI-304, AISI-347, AISI-416, AISI-420, AISI-440C, 17-4PH; Duplex; and other materials under request. |
| | Superficial Hardening | Materials Alloy #6, Colmonoy #5 and other materials under request |
| | | Types Seat surface hardening, Full seat surface and plug head hardening , Valve Stem hardening in the lower area guide |
| | Soft seats | Materials PTFE, PTFEG*, FEP, KEL-F, Polyurethane, PEEK |
| | Actuator | Types Pneumatic Double acting piston/cylinder, with spring for failure position. Field reversible and available in sizes 25, 50, 100, 200, 300, 400, 500 and 600. Options: manual handwheel, stroke limits and others (See actuators catalog). |
| | | Others Manuals. Electro-mechanical or Electro-Hydraulic under request |
| Positioner | Types | Pneumatics: HPP-2000 Electro-pneumatics: HPP-2000 Digital: Chronos |

* Reinforced PTFEG: PTFE with fiber glass. **AFP: Asbestos free packing.

| | Plain: with AFG | -20 a 600 | -29 a 315 |
| | Spiral Stainless Steel AISI 316 with AFG | -20 a 750 | -29 a 400 |
| | piral Stainless Steel AISI 316 (UNS S 31600) with Graphite ⁽³⁾ | -20 a 800 | -29 a 427 |
| Packing Set | PTFE Vee ring with plain bonnet | -20 a 450 | -29 a 232 |
| | PTFE Vee ring with extended bonnet | -20 a 600 | -29 a 315 |
| | Braided PTFE with plain bonnet | -20 a 500 | -29 a 260 |
| | Braided PTFE with extended bonnet | -20 a 600 | -29 a 315 |
| | Graphite / AFP (3) with plain bonnet | -20 a 750 | -29 a 400 |
| | Graphite / AFP (3) with extended bonnet | -20 a 800 | -29 a 427 |
| | PT and PTG with plain bonnet | -20 a 450 | -29 a 232 |
| | PT and PTG with extended bonnet | -20 a 600 | -29 a 315 |
| | PTG XT with plain bonnet o | -20 a 550 | -29 a 282 |
| | PTG XT with extended bonnet | -20 a 700 | -29 a 371 |
| Packing Spacer | Stainless Steel AISI 316 ((UNS S 31600) | -20 a 800 | -29 a 427 |
| Gland Flange | Stainless Steel AISI 316 - ASTM A 351 - CF8M | -20 a 800 | -29 a 427 |
| Gland Flange Bolting | ASTM A 193 Gr. B8 Class 1 ASTM A 193 Gr. B7M Zinc Plated | -20 a 800 | -29 a 427 |
| Bonnet Flange Bolting | ASTM A 193 Gr. B7 ASTM A 193 Gr. B7M ASTM A 194 Gr. 2H ASTM A 194 Gr. 2HM | -20 a 800 | -29 a 427 |

Notes: ⁽¹⁾ Alloy 6 seat ring (Stellite #6) solid manufactured until T/N: 41 (1.63))

⁽²⁾ Alloy 6 plug (Stellite #6) solid manufactured until T/N: 41 (1.63)

⁽³⁾ Do not use graphite above 750°F (400°C) in oxidizing service such as air or oxygen.

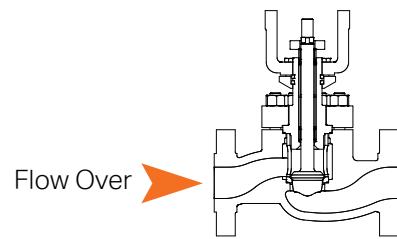

⁽⁴⁾ When using Alloy 6 (Stellite #6) guides, the plug stem should be hardened with Stellite #6 at the area in contact with the guide.

⁽⁵⁾ Materials in accordance with NACE - MR0175-2003 Rev. or ISO 15156
